

## Introduction

This is my build of dwmblocks. It is a tool to modify the status bar for dwm. It has modules for: 1. CPU usage 2. Memory Usage 3. Internet bandwidth in and out 4. Volume level 5. Battery 6. Date 7. Time

## What is dwmblocks?

As described by torrinfail:

Modular status bar for dwm written in c. # modifying blocks The statusbar is made from text output from commandline programs. Blocks are added and removed by editing the blocks.h header file.

## Dependencies

- DWM
- pulseaudio (uses pactl)

## Running dwmblocks

In your `~/.xinitrc` file put:

```
dwmblocks 2>&1 >/dev/null &
```
